FLUORESCENCE ESSENTIALS

Whatever your application for fluorescence analysis — general R & D and analytical, or a single-purpose detection and control — there's a unit here that's just right for your need.

Fluorispec — Designed to meet the demand for a more sophisticated, versatile, and easy-to-operate fluorescence spectrophotometer for a virtually limitless range of applications. The only one with two double monochromators to reduce light scatter and ensure maximum separation of sample peak from the Raman or Rayleigh scatters peaks.

Fluoripoint — Created specifically to put the best techniques in fluorescence and phosphorescence within reach of virtually any laboratory, and the only low-cost instrument with a phosphorescence capability. Ideally suited for routine or research work with organic and inorganic materials.

Fluorimet — A unique economical filter fluorimeter for the analysis requirements of even the smallest laboratory. Only three operating controls required for simple and rapid determinations of sample concentration. Used extensively in education. Call or write for complete details.
